SKILLS

AI / ML & GenAI: LLMs (Gemini, Perplexity), multi-agent orchestration, prompt engineering, retrieval / web-research (RAG-style), NLP, multimodal (image/audio) · PyTorch, TensorFlow/ Keras, scikit-learn, YOLOv8/OpenCV

Software & Data: Python, SQL, SQLite, REST APIs, Flask, Git/GitHub, Docker, CI/CD, n8n

ML foundations: time-series forecasting (CNN, LSTM/GRU), object & anomaly detection, transfer learning, data preprocessing & analysis

Currently learning: C#, RAG & MCP, cloud (Azure / AWS)

Industrial / OT (bonus): OPC UA, MQTT, Modbus, PLC/SCADA, sensors/IoT

Other: Driving License (Cat. B), SEP Qualification (up to 1 kV)

LANGUAGES

Polish	Native
English	B2
German	A2

COURSES

Machine Learning Course

Python in Industrial Automation

Grzegorz Czyrniański

AI / ML SOFTWARE ENGINEER

Software-minded ML engineer with an M.Sc. in IT Automation Systems, building AI/ML solutions in Python — from data analysis and PoC to working web services. Hands-on with GenAI and LLMs (multi-agent workflows, LLM orchestration, retrieval / web-research pipelines, multimodal processing) alongside classical ML and computer vision. I turn ideas into real, deployed solutions (Docker, REST, SQL) and thrive in fast-moving, experimental teams. Fluent Polish; keen to grow into C# and production GenAI (RAG, MCP).

PROJECTS

Multi-Agent AI / GenAI Automation System · LLM + Multimodal

- Built an autonomous multi-agent system in n8n orchestrating LLMs (Google Gemini, Perplexity) to plan and execute tasks, with automated web research (retrieval) and multimodal image/audio processing.
- Integrated external APIs (Telegram, Google Workspace) to ship a working, interactive product with automated scheduling — from idea to deployed PoC.

Real-Time Object Detection & Sorting System · Computer Vision

- Built a real-time CV pipeline (Python, YOLOv8/Ultralytics, PyTorch + CUDA, OpenCV) detecting products from a live camera at 30 FPS.
- Delivered a Flask web app (REST, live stream + stats) with SQLite logging, containerized with Docker and covered by unit tests.

M.Sc. Thesis — Forecasting System · Deep Learning

- Benchmarked classical models (ARIMA/SARIMA) against neural networks (LSTM, GRU, CNN and hybrids) for time-series forecasting in TensorFlow (GPU); full ML workflow with MAE / RMSE / R² evaluation and a deployed real-time app.

EXPERIENCE

Application Developer

2025-08 – present

JUMO, Wrocław

- Develop software and data-acquisition solutions with international engineering teams (incl. the Austrian branch), from design to deployment.
- Build data pipelines and cross-platform integrations (OPC UA, MQTT, REST) feeding real-time monitoring and reporting.
- Program controllers and design HMI/SCADA visualization with cloud connectivity for reliable, data-driven systems.

Inside Sales

2024-06 – 2025-08

JUMO, Wrocław

- Technical selection of automation and sensing components; interface between customers, production and subcontractors.

EDUCATION

M.Sc., IT Automation Systems

2024-03 – 2025-07

Wrocław University of Science and Technology

Specialization: Intelligent Industry Systems 4.0 · Thesis: forecasting with classical models & neural networks

B.Eng., Industrial Automation

2021-10 – 2024-02

Wrocław University of Science and Technology

Specialization: Automation of Machines, Vehicles and Devices
